A Report On

One Week Online Short Term Training Program On

“Digital Signal Processing and Its Applications”

05.07.2021- 10.07.2021

FINAL REPORT ABOUT THE PROGRAMME

The department of Electrical and Electronics Engineering of Sir M.VIT was organized a One Week Online Short Term Training Program On “Digital Signal Processing and Its Applications” during 05.07.2021 to 10.07.2021. 20 participants were registered for the workshop from EEE department. The Programme was inaugurated by Dr H L Suresh , HOD of EEE Dept of Sir MVIT. He had explained about the recent trends in the aviation sector and the usefulness of DSP systems in defense research. Also he have insisted for the inclusion of real time testing Mechanisms in the curriculum for the easier understanding of the course. There were totally five sessions were arranged on these two days excluding the Inaugural part. Speakers were selected such that they are having enough knowledge and presentation skills in the domain considered.

Contemporary Digital Signal Processors (DSPs) have large resources of logic gates and RAM blocks to implement complex digital computations. As DSP designs employ very fast I/Os and bidirectional data buses it becomes a challenge to verify correct timing of valid data within setup time and hold time. Floor planning enables resources allocation within FPGAs to meet these time constraints. DSPs can be used to implement any logical function that an ASIC could perform. The ability to update the functionality after shipping, partial re-configuration of a portion of the design and the low non-recurring engineering costs relative to an ASIC design (notwithstanding the generally higher unit cost), offer advantages for many applications.

Separate sessions were assigned for discussions and analysis. Where ever possible real time demo was arranged. Last session demo about the DSP module for motor speed control for industrial applications gives the students a real time exposure about the DSP systems.

Also Dr Nayana had given a presentation about the R&D activities happening in IISc and she had insisted for the collaboration of the various colleges to work on FPGA systems. Also she had invited the interested students to join with IISc working team to learn and practice with the DSP design tools. Since major portion of the participants are from entry level to their career, the presentations were very fundamental and at the same time higher quality was maintained. The students were really enthusiastic and willing to learn taken the opportunity to meet the demands of the industry. The following schedule was implemented for the entire Programme.

Date	Session	Time	Session Title	Resource Person
05-07-2021	1	Self paced	Introduction to Digital Signal Processing and DSP Toolbox	Dr. Nayana B R Dr. R. Subha
	2	2:45 to 3:45 PM	Lab session on Basics of MATLAB and DSP Toolbox.	Dr. R. Subha
06-07-2021	3	Self paced	Analog and Digital Filter Design	Dr. R. Subha

09-07-2021	9	Self paced	Bio-medical & Astrophysics Applications	Dr. Nayana B R
	10	2:45 to 3:45 PM	Demonstration of other applications	

All the presentation materials were given to the participants in the form of CD. Feedback being collected from the participants and they have shared their views and expectations during the valedictory ceremony. As the continuous process of this workshop it was decided to conduct one national conference on DSP systems in the month of April, 2017. Also the final year EEE students who are having no idea about the DSP, till then were motivated to do the project on the various problems which can be solved by DSP design. In this manner the core objective of the Programme was achieved to certain extend.

3. Practical exposure to FPGA systems and novel design controllers.
4. Emphasize Industrial relevance of IOT.
5. To inspire and motivate students to understand and explore the world of Data Analysis using IOT.

Nature of the program:

Present Program is a workshop on “Machine learning using Python” The aim is to introduce students to the world of Python programming. Updating students as per industry/global requirements and improving student’s skills through hands-on sessions.

Duration of Program:

The workshop was conducted for one week through online mode during 19th and 24th of July, 2021 between 9 am to 5 pm .

Participants:

The participation was open for all the department students

Guests:

The workshop made use of two external resource persons :

1. Mr. Venugopal,
Director, NTTF India, Bangalore.

2. Dr. Suresh Thulasidas
Professor, Center of Electronic system design, IISc.

Methodology:

The entire session was carried out with partial hands-on along with power point presentation (including the software installations). Question and answer session was also entertained throughout the program.

About the Workshop

In this new era of Control system engineering, we come across new Technologies, tools and frameworks to make our computing life simple, since Electrical Engineering is a Dynamic niche; our Knowledge needs to be updated with most recent technologies. Student's part of engineering stream should be made aware of new technologies trending in the market of FPGA. As faculties it's our responsibility to introduce students to different platforms and concepts, their by letting them to choose their stream / area of choice. Intelligent controller is one such trending area in today's date and control engineers are in high demand. With this workshops introduction we are trying to deliver the need of the market and also students can incorporate this understanding in their respective mini/main projects, and make one self more eligible for job placements.

Intelligent control system (ICS) is the science of examining control system with the purpose of drawing conclusions about that information. ICS is used in many industries to allow companies and organization to make better business decisions or disprove existing models or theories. ICS is a process used to inspect, clean, transform and remodel data with a view to reach to a certain conclusion for a given situation. ICS is typically of two kinds: linear or non linear. The type of data dictates the method of analysis. In qualitative research, any non-numerical data like text or individual words are analyzed. The proposed Two days workshop on "Recent Trends in Intelligent Controllers and Industrial Automation" organized by the Department of Electrical and Electronics Engineering of NMIT will be teaching the students from various Engineering domains about the benefits and challenges encountered in the evaluation of software based hardware applications in the present scenario.

For example, IoTs (Internet of Things) are the upcoming technology by using which prebuilt logic blocks and programmable routing resources; one can configure these chips to implement custom hardware functionality without ever having to pick up a breadboard or soldering iron. Developing the digital computing

tasks in software and compile them down to a configuration file that contains information on how the components should be wired together. In addition, IoTs are completely reconfigurable and instantly take on a brand new “personality” during recompilation in a different configuration of circuitry. Traditionally, IoTs have been reserved for specific vertical applications where the volume of production is small. For these low-volume applications, the premium that companies pay in hardware costs per unit for a programmable chip is more affordable than the development resources spent on creating an ASIC for a low-volume application. Today, new cost and performance dynamics have broadened the range of viable applications.

In the past, IoT technology could be used only by engineers with a deep understanding of digital hardware design. The rise of high-level design tools, however, is changing the rules of FPGA IoT programming, with new technologies that convert graphical block diagrams or even C code into digital hardware circuitry. This aspect is motivating the students to work on IoTs design and develop new user friendly hardware.

This one week workshop dealing with the fundamentals and the recent trends in the IoTs design that will be useful for the students to do their project works using IoTs.

Outcomes of the workshop:

1. Students grasped the importance of IOT and easy to use concepts of MATLAB programming.
2. Students are well versed in writing basic MATLAB program using fundamental concepts.
3. Faculty and Students are able to explore all new advanced modules and features of FPGA.
4. Faculty are able to give different problem statements based on IOT modules, their by coming up with all new ideas and solutions.

Shambhavi Choudhary

Back in Sept 2018, I started an online shopping platform (named Paridhaan collections) with products ranging from clothing and accessories to fine household items, all with a full time job. Being the sole owner, from connecting/negotiating to the factory people to using social media to sell my products, to keeping accountings, ensuring customer satisfaction to quality testing, this brief journey has taught me a lot. The products were being liked in less than no time and I had a lot of sales request coming in in the first month itself. I enjoyed seeing my customers happy and being a delhitie, the funda is why pay more when the market is competitive and production is more. The idea was to promote the Indian small scale industries workers who are paid minimum by the multinational giants for producing the same products under the company's tag. I located few small-scale industries and made a deal of selling their products directly to customers so that they can have the maximum profit and also the products reaches customer at a fairly lower wholesale rate since marketing, retail was not included in between. We had products as low as Rs 49 in sales. Corona has been tough on our industries and many had to shut their companies. All the small sellers tried supporting them but many had to shut down their productions and switch to other small paying jobs. India is a big market and production is also cheaper. Only when Entrepreneurship is mixed with consciousness for the clients and the workers, then only a business will grow well. Networking is the key and it is developed by building genuine relations. There are times when I have taken losses just for the sake of customers feedback and satisfaction but I guess being honest with your profession even if it's sweeping the floor (as mentioned by Mahatma Gandhi in his autobiography) always pays. In the end to all the entrepreneurs, I would suggest never ever stop learning. Markets are more competitive than ever before and always keep reading investing and personal growth books. In the end I wish to see India conquering the global markets where these talented small-scale workers are paid fair.

2) Linking Section (Two Parts)

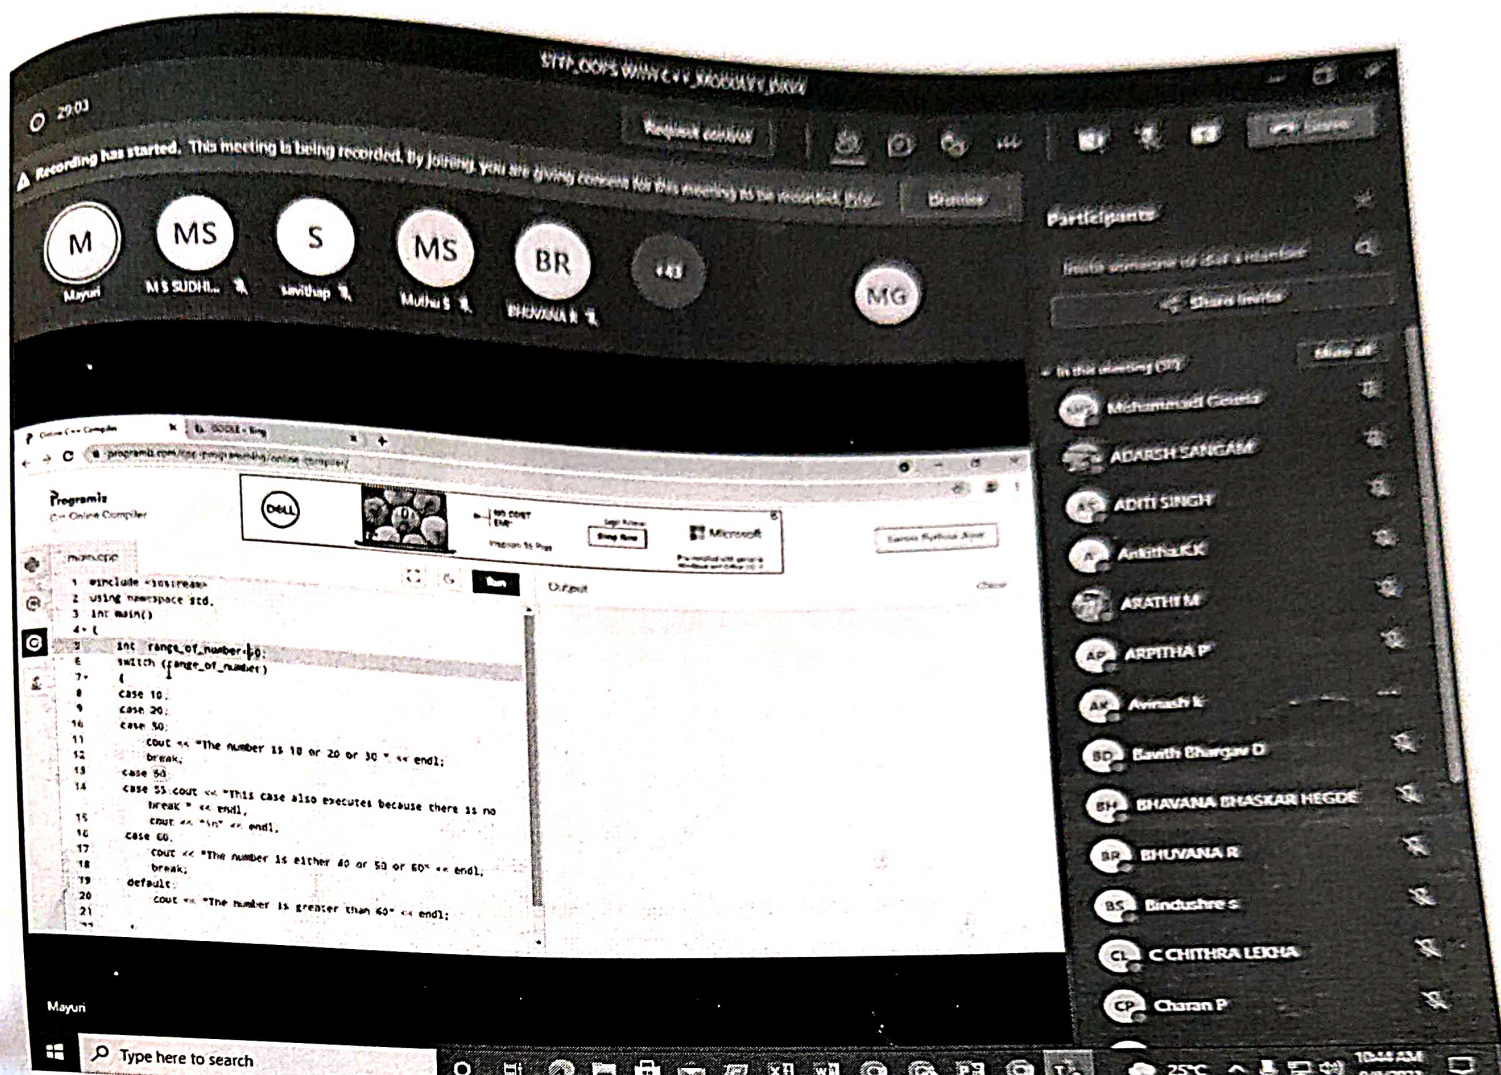

Header Files

- In order to use such pre-defined elements in a program, an appropriate header must be included in the program.
- Standard headers are specified in a program through the preprocessor directive `#include`.
- `#include <iostream>`

Namespaces

- permits grouping of various entities like classes, objects, functions, and various C++ tokens, etc. under a single name.
- Any user can create separate namespaces of its own.
using namespace std;
- Namespaces can be accessed in multiple ways:

Types of Functions

1. **Library Functions:** are the functions which are declared in the C++ header files such as ceil(x), cos(x), exp(x), etc.
2. **User-defined functions:** are the functions which are created by the C++ programmer, so that he/she can use it many times. It reduces complexity of a big program and optimizes the code.

Declaration of a function

- A function declaration tells the compiler about a function name and how to call the function. The actual body of the function can be defined separately.
